

**FORMAN CHRISTIAN COLLEGE UNIVERSITY**  
**COMP451: Compiler Construction (2+2 Credit Hrs)**  
**Course Outline and Lesson Plan**

**Instructor Information:**

**Name:** M. Rauf Butt  
**Contact:** [raufbutt@fccollege.edu.pk](mailto:raufbutt@fccollege.edu.pk)  
**Office:** S-214  
**Office Hours:** TBD

**Pre Requisites:**

- Data Structures & Algorithms
- Theory of Automata

**Course Material:**

1. Lab/Class Activity Handouts
2. Class Handout
3. Video Lectures

**Text Books:**

1. Compilers: Principles, Techniques, and Tools, second edition; Aho, Lam, Seithi, and Ullman
2. Programming in C; By Dennis Richie
3. Flex & Bison; By John Levine

**Course Objectives:**

Differentiate between different levels of programming languages. Understand the role of front-end and back-end of a compiler. Recognize different types of grammars. Understand and define grammars in BNF, syntax diagrams, regular expressions. Define tokens using the notation of regular expressions. Convert regular expressions into finite automata. Implement a lexical analyzer. Define a programming language syntax using a CFG. Construct a parse tree for a given program. Differentiate between top-down and bottom-up parsing strategies. Understand LL (k) and LR (k) grammars. Write a top-down parser using recursive-descent and LL (1) parsing methods. Understand simple-precedence, operator precedence and SLR parsing methods. Understand semantic analysis (type checking, scope checking etc.) Understand various types of runtime environments. Understand code generation techniques. Understand code optimization techniques.

## Course Learning Outcomes (CLOs)

<b>CLO's</b>	<b>Description</b>	<b>Level</b>
CLO:1	Describe the architecture, and functions of different components of a compiler	C1 (Remember)
CLO:2	Describe how a program gets executed and what are different programs other than compiler that help execute the program.	C2 (Understand)
CLO:3	Application of formal notations to define a programming language	C3 (Apply)
CLO:4	Design and implement different segments of lexical and syntax analyzer using an appropriate programming language.	C3 (Apply)
CLO:5	Integrate different smaller segments and formulate a complete working lexical and syntax analyzer.	C3 (Apply)
CLO:6	Differentiate and compare open source compiler, interpreter and cross compilers available.	C4 (Analyze)

## Mapping of CLO's to PLO's

<b>PLOs</b>	<b>CLO:1</b>	<b>CLO:2</b>	<b>CLO:3</b>	<b>CLO:4</b>	<b>CLO:5</b>	<b>CLO:6</b>
Computing Knowledge	√	√	√			
Problem Analysis				√		√
Design and development of solutions				√	√	
Investigation						√
Modern Tool Usage			√	√	√	

Week	Theory Session (1 Hr 50 Min)	Lab Session (1 Hr 50 Min)
1	<ul style="list-style-type: none"> <li>• Introduction to the course.</li> <li>• Introduction to compilers</li> <li>• Phases of compilation.</li> <li>• An overview of phases of compilers and how these work.</li> <li>• An example showing how a very simple line of code is passed through all the phases of compiler.</li> </ul>	A primer in C Programming Language <ul style="list-style-type: none"> <li>• Basic program structure</li> <li>• Variables and Pointers</li> <li>• Programming constructs (loops, control structures)</li> <li>• User defined functions</li> </ul>
2	<ul style="list-style-type: none"> <li>• Cousins of compilers <ul style="list-style-type: none"> <li>○ System programs that help compiler execute a program completely.</li> <li>○ Looking into how a C program is expanded while execution.</li> <li>○ Difference between .c, .i, .s, and .o files.</li> <li>○ Explaining linking and loading.</li> <li>○ Difference between static and dynamic linking.</li> </ul> </li> </ul>	A primer in C Programming Language ... <ul style="list-style-type: none"> <li>• Arrays</li> <li>• Strings</li> <li>• Dynamic memory allocation.</li> <li>• Structures in C</li> </ul>
3	<ul style="list-style-type: none"> <li>• Lexical Analysis <ul style="list-style-type: none"> <li>○ Working of a lexical analyzer</li> <li>○ Formal definition of tokens, lexemes, patterns.</li> <li>○ Identification of tokens</li> <li>○ Regular Languages</li> <li>○ Regular Expressions</li> </ul> </li> </ul>	<b>Quiz 1</b> <b>Lab 1</b>
4	<ul style="list-style-type: none"> <li>• Lexical Analysis ... <ul style="list-style-type: none"> <li>○ Formal Languages</li> <li>○ Lexical Specification</li> <li>○ Finite Automata</li> <li>○ Regular Expressions to NFA</li> </ul> </li> </ul>	<b>Lab 2</b>
5	<ul style="list-style-type: none"> <li>• Lexical Analysis ... <ul style="list-style-type: none"> <li>○ NFA to DFA</li> <li>○ Implementation of DFA</li> <li>○ Problem solving session for Lexical Analysis</li> </ul> </li> <li>• Syntax Analysis <ul style="list-style-type: none"> <li>○ Introduction to Parsing</li> <li>○ Context Free Grammar</li> <li>○ Left and Right Derivations</li> </ul> </li> </ul>	<b>Quiz 2</b> Introduction to FLEX Programming <b>Programming Assignment 1 Uploaded</b>
6	<ul style="list-style-type: none"> <li>• Syntax Analysis ... <ul style="list-style-type: none"> <li>○ Left and Right Derivations <ul style="list-style-type: none"> <li>▪ Problem solving session for left and right derivation</li> </ul> </li> <li>○ Ambiguity <ul style="list-style-type: none"> <li>▪ Why ambiguity?</li> </ul> </li> </ul> </li> </ul>	<b>Lab 3</b>

	<ul style="list-style-type: none"> <li>▪ How to eliminate it?</li> <li>○ Abstract Syntax Trees <ul style="list-style-type: none"> <li>▪ Basic introduction</li> <li>▪ How to create and traverse an AST</li> </ul> </li> </ul>	
7	<ul style="list-style-type: none"> <li>• Syntax Analysis ... <ul style="list-style-type: none"> <li>○ Recursive Descent Parsing</li> <li>○ Left Recursion</li> <li>○ Predictive Parsing</li> <li>○</li> </ul> </li> </ul>	<b>Lab 4</b> <b>Quiz 3</b> <b>Programming Assignment 1 Due</b>
8	<ul style="list-style-type: none"> <li>• Syntax Analysis ... <ul style="list-style-type: none"> <li>○ FIRST and FOLLOW</li> </ul> </li> </ul>	<b>Lab 5</b>
9	Revision Session	<b>Mid Exam (Course covered till end of week 8)</b>
10	<ul style="list-style-type: none"> <li>• Syntax Analysis ... <ul style="list-style-type: none"> <li>○ LL1 parsing table</li> <li>○ Introduction to Bottom Up Parsers</li> <li>○ Shift Reduce parsing</li> </ul> </li> </ul>	<b>Lab Exam (Tentative)</b>
11	<ul style="list-style-type: none"> <li>• Syntax Analysis ... <ul style="list-style-type: none"> <li>○ Operator Precedence parser</li> <li>○ Introduction to Bison</li> </ul> </li> </ul>	<b>Lab 6</b> <b>Programming Assignment 2 Uploaded</b>
12	<ul style="list-style-type: none"> <li>• Syntax Analysis ... <ul style="list-style-type: none"> <li>○ LR(0) Parser</li> <li>○ SLR(1) Parser</li> <li>○ LALR(1) Parser</li> </ul> </li> </ul>	<b>Lab 7</b> <b>Quiz 4</b>
13	<ul style="list-style-type: none"> <li>• Syntax Analysis ... <ul style="list-style-type: none"> <li>○ CLR(1) Parser</li> </ul> </li> <li>• Ways to represent semantic rules: <ul style="list-style-type: none"> <li>○ Syntax Directed Definition</li> <li>○ Syntax Directed Translation</li> </ul> </li> </ul>	<b>Lab 8</b> <b>Programming Assignment 2 Due</b> <b>Class Project Uploaded</b>
14	<ul style="list-style-type: none"> <li>• Difference between SDD and SDT</li> <li>• Types of SDD <ul style="list-style-type: none"> <li>○ S Attributed</li> <li>○ L Attributed</li> </ul> </li> <li>• Examples of SDD</li> <li>• Examples of SDT</li> </ul>	<b>Lab 9</b> <b>Quiz 5</b>
15	<ul style="list-style-type: none"> <li>• Intermediate Code Generation <ul style="list-style-type: none"> <li>○ Why intermediate code</li> <li>○ Types of Intermediate Code <ul style="list-style-type: none"> <li>▪ Syntax tree</li> <li>▪ Three Address Code</li> </ul> </li> <li>○ Implementation of three address code <ul style="list-style-type: none"> <li>▪ Quadruple</li> <li>▪ Triple</li> <li>▪ Indirect Triple</li> </ul> </li> </ul> </li> </ul>	<b>Lab 10</b>

	<ul style="list-style-type: none"> <li>○ Three address code for flow of control statements</li> <li>○ Three address code for arrays</li> <li>● Three address code for case statements</li> </ul>	
16	<ul style="list-style-type: none"> <li>● Code Optimization <ul style="list-style-type: none"> <li>○ Detecting loops</li> <li>○ Basic Blocks</li> <li>○ Program flow graphs</li> <li>○ DAG</li> </ul> </li> </ul>	<b>Class Project Due</b>

Note that this outline is not carved on stone. Course staff / instructor reserves all rights to make appropriate changes as per needed.

**Assessment Criteria**

- In Class Quizzes 15%
- Labs 20%
- Mid Semester Exam 20%
- End Semester Exam (Comprehensive) 30%
- Programming Assignments / Home Work 7%
- Class Project 8%

## **NOTE:**

- This is a lab course and we will conduct lab sessions almost every week.
- Labs will be conducted in class and hence only those students will perform lab who are present in the class.
- Students will have to prepare a report for every lab. Format of the lab will be uploaded on Moodle course page.
- We may have 4 to 6 quizzes. If number of quizzes is greater than 5, we may drop one quiz.
- Assignments/Home works will be uploaded and **MUST** be submitted within the deadline specified on handout.
- There will be **no retake for any instrument**.
- In case if any student under special circumstances is allowed to take entire course online, he/she will have to attempt the labs online within the given time frame.
- Online students (if any) will have to go for an online mid exam followed by a viva.
- More details will be provided in the introductory lecture during first week of this semester.
- Online students should feel free to ask any query via email or we can have an online zoom meeting.
- **Students are advised to attend all assigned lectures.** It is entirely the students' responsibility to recover any information or announcements presented in lectures from which they were absent.
- **It is mandatory to maintain a minimum of 75% attendance.**
- **In case if the attendance drops below the given threshold student will have to present written permission from the HoD to appear in the MID and or Final Exam.**
- **All work** that you submit in this course **must be your own**.
- **Unauthorized group efforts** are considered academic dishonesty.
- You may discuss homework in a general way with others, but you may not consult anyone else's written work. You are guilty of academic dishonesty if:
  - You **examine another's solution** to an assignment
  - You **allow another student to examine your solution** to an assignment
  - You fail **to take reasonable care to prevent another student from examining your solution** and that student does examine your solution.
- **Cheating, plagiarism and other forms of academic fraud** are taken very seriously. University Policy of plagiarism will be applicable in the case.
- **Attendance** does not carry any graded marks. However, be very cautious as we may have pop up quizzes in class.
